

**Core Source Technologies
Job Description**

Senior Compliance Engineer

SUMMARY

A detail-oriented Compliance Engineer with a minimum 10 years experience is needed for product compliance testing at a Core Engineering Services firm. This person's primary responsibilities will be to support product testing from concept through prototype development and testing with a focus on risk mitigation and early compliance issue resolution. The incumbent must be a self-starter able to analyze designs, verify components, develop test strategies, provide extensive documentation support and analyze/review Lab product test reports, all while keeping projects on track. The incumbent must be a strong communicator able to act as liaison between customers and NRTLs. Understanding of project management and project management software a plus.

Qualifications include a BSEE/MSEE and 10 years of compliance experience (EMC, safety, and environmental). Intimate knowledge of compliance specifications and test procedures for NEBS, Defense Standards, FCC, CE, NRTL Certification, etc is a must. The successful candidate must be detail-oriented, strong problem solving ability, and excellent verbal and written communication skills. Experience working for an NRTL is a plus!
